

ABSTRACT OF THE DISCLOSURE

According to a system for providing event information of the present invention, a content provider photographs and records the lecture content and the like of lecture meetings on the basis of requests from users or its own judgment and posts the subjects, lecturers, date and hour of the obtained lecture meetings on its own home page over the Internet. When the user selects a lecture meeting the user wants and registers the user's mail address or the like, the user receives the delivery of photographed content and materials of lecture content and the like of the lecture meeting from the content provider. At that time, an advertisement is simultaneously delivered from an advertising server which the content provider individually contracts with, so that the user's monetary burden can be lightened.
